

My Pool Has Gone Green! What do I do?

Pools go green for many reasons, although at the core of this problem is a drop in free chlorine. The cause of this chlorine drop can be poor filtration, equipment failure or heavy pool use. Regardless of the cause, the solution remains the same. Assuming that all equipment is operating properly, you will need to follow a step-by-step green pool cleanup process.

If you have a green pool, you will need to bring a water sample into The Poolstore. We will test your water and explain our easy to follow green pool cleanup process.

Or, call us on 9583 1470 to book a pool technician to fix your green pool.
